Date Picker Design Checklist

- 01 – Date picker, a date-range picker or a time picker?
- 02 – Should it be activated when a user clicks on input/icon?
- 03 – Should we combine day/month/year into one input field?
- 04 – Should the date picker contain default pre-selected values?
- 05 – Should we include ‘prev day’/’current day’/’next day’ nav?
- 06 – How do we design the navigation between months and years?
- 07 – What happens if a user clicks on the empty bar?
- 08 – How do we communicate unavailable options?
- 09 – Should we allow for “smart” date input?
- 10 – Do we use dots color coding for different rates?
- 11 – Is date picker the right pattern to use for date selection?

Date Picker Design Checklist

- 12 – How do we highlight a selected date range?
- 13 – Do we display a weekly/monthly/daily view by default?
- 14 – Should the user be able to type in a date in the input field?
- 15 – Should user only select pre-defined values?
- 16 – Should the date-picker overlay appear? And if yes, when?
- 17 – Should the date picker contain default pre-populated values? ?
- 18 – Should we display availability, price, etc.?
- 19 – Should the week run from Mon–Sun or Sun–Sat?
- 20 – How do we avoid displaying unavailable dates or zero-results?
- 21 – Is a date picker the right pattern to use for date selection?

Summary

- 01 – Date input: <3 taps, date-range input: <6 taps.
- 02 – Seamless flow between inputs triggered automatically.
- 03 – Use forgiving input to “safeguard” manual input.
- 04 – Allow “smart” input if possible and avoid “no results”.
- 05 – Carefully consider pre-selected/default values.
- 06 – Persist data after page refresh.
- 07 – Add a mini-stepper for quick jumps.
- 08 – Expose critical details prominently.
- 09 – Consider switching monthly and weekly views.
- 10 – Sometimes typing is better than <select>-drop-down.
