Video Player Checklist

- 01** – How do you design the thumb, the track, the controls?
- 02** – How do you display/hide controls, and when?
- 03** – How do you optimize for precise input and fast-forwards?
- 04** – How do you keep a slider easy to use on mobile?
- 05** – How do you design hover vs. tap interaction?
- 06** – How do you keep position fixed on refresh?
- 07** – How do you link to specific parts of the video?
- 08** – Do we use preview clips, popularity bar, key moments preview?
- 09** – How do you deal with subtitles + lang, position, size, color?
- 10** – How do you design the scale of the slider?
- 11** – Is the UI and controls fully accessible?
- 12** – What happens if the video is outside of the view?

Sliders Design Checklist

- 01 – How much space can we afford for the slider?
- 02 – Do we use a single or double slider?
- 03 – Should the slider be continuous or discrete?
- 04 – How do we design the thumb, track, labels?
- 05 – How do we choose the slider scale (linear / non-linear)?
- 06 – How many tick points do we need?
- 07 – How do we label lower and upper boundaries?
- 08 – What icon do we use for the thumb, if any?
- 09 – How and where do we display the current value?
- 10 – Should we provide a more precise text input as well?

Sliders Design Checklist

- 11** – How do we we indicate availability to avoid dead ends?
- 12** – What if the user taps on an area between two thumbs?
- 13** – Are there any values on a slider that shouldn't be accepted?
- 14** – Should the user be able to restore previous state?
- 15** – How do we announce changes to screen readers?
- 16** – Do we have interdependent sliders?
- 17** – How should the track change with thumb movements?
- 18** – Should users be able to “lock” some values?
- 19** – Should we have some sort of hover/tap preview?

Summary

- 01 – Sliders are great when there are many options.
- 02 – Sliders encourage exploration, not precision.
- 03 – Sliders usually need (horizontal) space.
- 04 – Wide track, large thumb, generous padding.
- 05 – Display outcome in real-time.
- 06 – Smooth, continuous feedback matters.
- 07 – Thumb doesn't really need iconography.
- 08 – Algorithmic scale for tick marks instead of linear.
- 09 – Having a text input fallback is usually a good idea.
